EDUCATION

Universitat Politècnica de Valencia

Dual Degree of Mathematics and Business Administration (2:1 Hons)

Valencia, ES

09/23 – 05/28

- Relevant Coursework: Statistics and Econometrics, Numerical Analysis, Partial Differential Equations.

Cambridge House British International School

High School Diploma (GPA 9.44/10)

Valencia, ES

09/21 – 06/23

- Mathematics (A), Physics (A), Business (A), Spanish Literature (A).

WORK EXPERIENCE

GPTAdvisor – Wealth Management AI

Institutional Sales & Business Development

Valencia, ES

06/25 – 09/25

- Delivered €90k in revenue by designing and executing a global sales strategy, securing two POC deals.
- Contributed to sales meetings with C-suite executives at major financial institutions (e.g., BlackRock, Invesco).

Summer Intern

05/24 – 09/24

- Optimised AI model prompts, reducing response time by 5 seconds and enhancing user experience.
- Managed datasets of 70,000+ financial instruments (equities, bonds, indices) to design client-specific Focus Lists, enabling banks to refine product offerings and improve client outcomes.

PwC – Audit & Consulting

Insights Day (Received Summer 2025 Internship offer)

Valencia, ES

11/24 – 11/24

- Advised PwC professionals on AI applications to enhance internal efficiency during Insight Day.
- Shadowed a PwC Partner, gaining insight into consulting workflows and client engagement.

EXTRACURRICULAR

UPV Investment Club

Member

Valencia, ES

01/25 – Present

- Lead the organisation of the first McKinsey & Company workshop at my university, attended by 100+ students, featuring a consulting case study and expert consulting tips.
- Options Risk Modelling Project: Built a Black-Scholes pricing and Monte Carlo simulation tool to analyse option risk; developed heatmaps to visualise Greeks' sensitivities and pricing behaviour.
- Conducted a comparative analysis of implied vs. realised volatility for S&P 500 and Bitcoin (2014–2024), leveraging historical data and statistical modelling to assess market behaviour and option trading insights.
- Performed a quantitative study of Delta in options pricing, analysing its role in hedging, exploring Taylor approximations, and simulating Delta vs. Delta+Gamma hedging strategies.

Morgan Stanley

FX Trading Hackathon

Paris, FR

09/25 – 09/25

- Built and deployed an algorithmic FX trading strategy in a team setting, achieving first place with 186% higher PnL than the second team.
- Detected a market crash through continuous volatility analysis and secured the position by hedging against a 35% drawdown.

Quantitative Finance & Algorithmic Trading Course

08/25 – 08/25

- Explored bonds, stock market mechanics, portfolio optimisation (Markowitz model, CAPM), and risk measurement (VaR, stochastic processes).
- Applied Python for data analysis, financial modelling, and implementation of derivatives, interest rates and random behaviour in finance.
