## EDUCATION

### Universitat Politècnica de València

2023—2028

- Double Degree in Mathematics & Business Administration (2:1 Hons)
- Relevant Coursework: Statistics and Econometrics, Numerical Analysis, Differential Equations

### Cambridge House British International School

2021—2023

- A Levels: Mathematics, Physics, Business and Spanish Literature (AAAA)
- 9 IGCSEs: 7 A\*s, 1 A, 1 B

## WORK EXPERIENCE

**GPTadvisor** — AI B2B company providing SaaS solutions to enhance productivity in the wealth management divisions of leading banks (e.g. Santander, Cecabank, Andbank).

### *Institutional Sales & Business Development*

June 2025—September 2025

- Designed and executed a high-ticket (€100k+) global sales strategy, targeting multiple seniority levels within financial institutions and securing two proof-of-concept agreements.
- Supported the full sales cycle, from prospecting and qualifying leads to booking meetings and contributing to negotiations with banks and wealth managers.

### *Wealth Management AI Intern*

May 2024—September 2024

- Delivered presentations to senior management, enhancing clarity and persuasiveness in communication.
- Optimised AI model prompts, reducing response time by 5 seconds and enhancing user experience.
- Managed datasets of 70,000+ financial instruments (equities, bonds, indices) to design client-specific Focus Lists, enabling banks to refine product offerings and improve client outcomes.

### *Financial Advisor - Crypto Projects*

2021—2023

- Advised on fund allocation and treasury management for multiple crypto projects, driving sales volumes exceeding US\$1m on the SOL/ETH blockchains.
- Coordinated international teams across Europe, the Americas, and Asia, overcoming language and cultural barriers in fast-paced environments.
- Directed financial planning and balance sheet management in Excel, while allocating resources to launch 5+ successful blockchain projects.
- Oversaw cross-functional teams of developers, assigning tasks according to technical expertise (Web2/Web3), and ensuring timely product delivery.

## EXTRACURRICULAR

### UPV Investment Club

May 2024—Present

- Led the organisation of the first McKinsey & Company workshop at my university, attended by 100+ students, featuring a consulting case study and expert consulting tips.
- Options Risk Modelling Project: Built a Black-Scholes pricing and Monte Carlo simulation tool to analyse option risk; developed heatmaps to visualise Greeks' sensitivities and pricing behaviour. ([Web App](#))
- Conducted a comparative analysis of implied vs. realised volatility for S&P 500 and Bitcoin (2014–2024), leveraging historical data and statistical modelling to assess market behaviour and option trading insights.
- Performed a quantitative study of Delta in options pricing, analysing its role in hedging, exploring Taylor approximations, and simulating Delta vs. Delta+Gamma hedging strategies. ([Link](#))

### Quantitative Finance & Algorithmic Trading Course

August 2025

- Explored bonds, stock market mechanics, portfolio optimisation (Markowitz model, CAPM), and risk measurement (VaR, stochastic processes).
- Applied Python for data analysis, financial modelling, and implementation of derivatives, interest rates and random behaviour in finance.

### J.P. Morgan Investment Banking Virtual Simulation

September 2024

- Identified an M&A target by assessing strategic and financial criteria, built a DCF valuation, and produced a client-ready summary outlining company profile and auction process.
